

Oxide

OXIDE is an unusual ceramic surface finish developed through research by ISLA, to interpret the needs of contemporary design. The inspiration derives from the marriage of two natural materials, stone and metal, shaped by the process of oxidation that becomes the distinguishing aesthetic element. The result is a collection offering an elegant, minimalist and extremely refined mood, ideal for enhancing any style of interior.

The colour palette is inspired by the periodic table of chemical elements, starting with COPPER, a warm, coppery shade, and then, in order of tone, BRONZE, which adds amber notes to grey, and TITANIUM, an elegant harmony of pearl shades. ALUMINIUM rounds off the colour range with the lightest and brightest proposal. Four well-defined, but at the same time neutral, colours offering the right solution for today's residential spaces.

Technology: full-body porcelain tile

Colours: Bronze | Titanium | Aluminium | Copper

Sizes and finishes:

60x120 cm. rectified

80x80 cm. rectified

40x80 cm. rectified

60x60 cm. rectified

Trim tiles:

Skirting tile 6.5x60 cm and 7.5x80 cm
